Note: While you may not be the provider responsible for obtaining prior authorization, as a condition of payment you will need to ensure that prior authorization has been obtained.

Overview

Pharmacological approaches to treating Duchenne muscular dystrophy (DMD) slow disease progression by reducing inflammation, increasing muscle strength, improving forced vital capacity, delaying scoliosis, and reducing the need for surgery. Corticosteroids are considered the standard of care, delaying loss of ambulation and respiratory decline by several years. Exonskipping antisense oligonucleotide therapies slow the progression of DMD in about 30% of patients but have not been proven to improve survival or functional outcomes.

Approval of Vyondys 53 was based on an increase in a surrogate marker, dystrophin production in skeletal muscle. No functional outcome improvement has been shown in the clinical trials for Vyondys 53.

Food and Drug Administration - Approved Indications

Vyondys 53 (golodirsen) is an antisense oligonucleotide indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients who have a confirmed mutation of the DMD gene that is amenable to exon 53 skipping.

This indication is approved under accelerated approval based on an increase in dystrophin production in skeletal muscle observed in patients treated with Vyondys 53. Continued approval for this indication may be contingent upon verification of a clinical benefit in confirmatory trials.

Clinical Guideline Coverage Criteria

The plan may authorize coverage of Vyondys 53 for Members when all the following criteria is met:

Initial Authorization Criteria

 Documented diagnosis of Duchenne muscular dystrophy (DMD) and medical records confirm a mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping

Note: Common Duchenne muscular dystrophy deletions that are theoretically amenable to exon 53 skipping include: 52, 45-52, 47-52, 48-52, 49-52, and 50-52.

AND

- 2. The prescribing physician is a neurologist or a provider who specializes in the treatment of Duchenne muscular dystrophy
- 3. Documentation of **one (1)** of the following:
 - a. Patient has been receiving a stable dose of corticosteroids for a period of at least 6 months and will continue to utilize them in combination with Vyondys 53
 - b. Patient has a contraindication to corticosteroids

AND

3. Vyondys 53 will be not used concomitantly with any other disease-modifying therapies for Duchenne muscular dystrophy

Reauthorization Criteria

 Documented diagnosis of Duchenne muscular dystrophy (DMD) with medical records confirming a mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping

Note: Common Duchenne muscular dystrophy deletions that are theoretically amenable to exon 53 skipping include: 52, 45-52, 47-52, 48-52, 49-52, and 50-52.

AND

- The prescribing physician is a neurologist or a provider who specializes in the treatment of Duchenne muscular dystrophy
 AND
- 3. Documentation of **one (1)** of the following:
 - a. Patient continues to utilize corticosteroids in combination with Vyondys 53
 - b. Patient has a contraindication to corticosteroids

AND

4. Documentation that based on the prescriber's assessment, the Member continues to benefit from Vyondys 53, documented by a standardized assessment of motor function or respiratory function

AND

Vyondys 53 will be not used concomitantly with any other disease-modifying therapies for Duchenne muscular dystrophy

Limitations

- Initial approval of Vyondys 53 will be authorized for six (6) months. Reauthorization of Vyondys 53 will be provided in 12-month intervals.
- Members new to the plan stable on Vyondys 53 should be reviewed against Reauthorization Criteria.
- The Plan will not authorize the use of Vyondys53 in Members with Duchenne muscular dystrophy who do not have a confirmed mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping

Codes

The following code(s) require prior authorization:

Table 1: HCPCS Codes

HCPCS Codes	Description
J1429	Injection, golodirsen, 10 mg

Background, Product and Disclaimer Information

Point32Health prior authorization criteria to be applied to Medicare Advantage plan members is based on guidance from Medicare laws, National Coverage Determinations (NCDs) or Local Coverage Determinations (LCDs). When no guidance is provided, Point32Health uses clinical practice guidance published by relevant medical societies, relevant medical literature, Food and Drug Administration (FDA)-approved package labeling, and drug compendia to develop prior authorization criteria to apply to Medicare Advantage plan members. Medications that require prior authorization generally meet one or more of the following criteria: Drug product has the potential to be used for cosmetic purposes; drug product is not considered as first-line treatment by medically accepted practice guidelines, evidence to support the safety and efficacy of a drug product is poor, or drug product has the potential to be used for indications outside of the indications approved by the FDA. Prior authorization and use of the coverage criteria within this Medical Necessity Guideline will ensure drug therapy is medically necessary, clinically appropriate, and aligns with evidence-based guidelines. We revise and update Medical Necessity Guidelines annually, or more frequently if new evidence becomes available that suggests revisions.

Treating providers are solely responsible for the medical advice and treatment of Members. The use of this guidelines not a guarantee of payment or a final prediction of how specific claim(s) will be adjudicated. Claims payment is subject to eligibility and benefits on the date of service, coordination of benefits, referral/authorization, utilization management guidelines when applicable, and adherence to plan policies, plan procedures, and claims editing logic.
